

You are cordially invited to

# Meeting the Climate Change Imperative: Strategies for Managing your Greenhouse Gas Emissions Portfolio

The IHS Climate Change Summit | Sao Paulo, Brazil | April 8th 2009

This key workshop will answer:

- How may evolving climate change policies, along with increasing stakeholder pressures, alter the investment landscape for greenhouse gas (GHG) abatement projects and technologies both internationally and at the regional level in South America?
- What strategies and tactics are companies employing to manage their emissions portfolio in this uncertain environment?

**@ihs.com**

This invitation-only workshop brings together a select community of business leaders in sustainability and climate change to address these critical questions. The sessions will be led by IHS experts who analyze climate change policies and the associated technology landscapes, and have had many years experience working directly with customers on greenhouse gas emissions management issues. The workshop will serve as a roadmap to understanding how companies are effectively managing their emissions and GHG abatement project portfolios — ranging from assessing carbon footprints to deciding on and implementing abatement projects — and will include specific case studies.

# IHS Environment Workshop

April 8<sup>th</sup>, 2009

**RENAISSANCE SAO PAULO HOTEL  
ALAMEDA SANTOS, 2233 • SAO PAULO, BRAZIL 01419-002**
